Control your environment using Smartphones, Tablets or PCs

2touch

2touch

Control your environment using Smartphones, Tablets or PCs

Regardless of the Android®, IOS® or Windows® operating system, you will be able to control your entire environment as soon as you are connected with the 2 Touch Server.

- Lights – On – Off – Dimmer
- Shades – Open – Close – Stop
- Windows – Open – Close
- Doors – Open – Close
- Heating – On – Off – Degrees Celsius
- Controllable Wall Sockets – On – Off

- Bed – Head Section – Foot Section – Bed Height
- Media – All infrared commands
- Door Management – Accept Doorbell – Talk – Show Video – Open
- Scenarios – Freely defined across all technologies

Technology

- Z-wave wireless communications (simple retrofitting for inventory)
- KNX home bus (new construction – comprehensive retrofitting)
- Media control through WLAN

Implementation

2Touch is not simply one piece of hardware or software – it is a C O N C E P T
Specially selected hardware ensures that a retroactive radio control system can be easily implemented by consumers (lights, shutters, heat and so on) in most cases.

2Touch is provided and supplied as a bundle. In this, the Carefree Package will be determined during a project meeting (consultation) and pre-wired and tested by Insors GmbH to be supplied and mounted by specialists at your site.

2Touch has been provided with security equipment which makes it possible, for example, to re-start a router that has "crashed" from a smartphone.

Technology – as much as necessary – as secure as possible
